RHG December 2020 K9KQX – Latest Go Box Case

Latest Go Box Case – By Mike Sorensen K9KQX

Since getting my ticket a few years back, I've dabbled a little with go box cases. Many of you saw the wood box I created for my IC-7300. That was my actual shack in the house as I used to set up next to end table by the couch. Since then I have a real desk at home and traded the original go box.

Well this past summer I picked up a FT-450D from a SK and decided that I'd try another go box. This time with a shallow depth 4U high Gator box. I wanted it to be reasonable small, but robust to handle in shipment.

One of my design goals with this setup was a self-contained HF setup, with the computer and monitor in the case somehow. Ideally all everything but the antenna would fit in the case.

So, to start with, using an FT-450d has its good and bad points. The good points being a decent ATU, bright display, and good contrasting text on the front panel controls. The bad points are no panadapter, and probably the biggest draw back on space consideration is the lack of a USB interface for digital modes. Because of that I needed to use a Signalink which eats up room in the case.

I purchased two metal shelves about 10 inches deep and mounted the 450D and Signalink on the bottom shelf. The top shelf is a power supply and my homebuilt Magnetic loop stepper motor controller. This would allow band changes without having to get up and mess with the loop.

Below if notice I have LED lighting tape strip mounted on the upper shelf to light up the lower section to read the display easier. This will also provide lighting at night to write on paper. I got this from Menards, and these lights when run off DC don't generate any RFI.

Next, I wanted the ability to run either off batteries or 120v, so I add at Samlex battery backup module(BBM-1225) This neat little device will charge a 12v lead acid battery from the Samlex 12v power supply. If the power supply is off, the battery will take over without any cable changes.

There're also some Anderson power pole distribution blocks in the back to hook things up neatly, but allow for easy changes if needed. That panel on the back is a 2U server rack blanking panel. I installed the power switch and power poles on the back to hook up the battery and to power an external device easily.

Finally, I had a strong desire to integrate a computer in the unit somehow.

Reason were the following:

1. I did not want to take my laptop outside.
2. Desired to have a GPS receiver for a time source from satellites, thus no internet needed for accurate FT8 time source. Accurate time is needed for FT8, and helpful for logging
3. Wanted something low power that would run directly off of 12v, thus making it easy to run off a car battery
4. Wanted computer integrated to keep the rats nest of wires to a minimum or well hidden.
5. Self-contained go box that is 100% ready, just grab and go, and don't forget the antenna

I purchased the following for the computer setup

1. 12" 1920×1080 HDMI monitor from ebay(TO GUARD 12" HDMI HD display)
2. Raspberry Pi4 Model B 4GB ram Adafruit PID 4269
3. Zero2Go Omini Multi Channel Power supply Adafruit PID 4114
4. Adafruit Ultimate GPS breakout ver 3 Adafruit PID 746
5. Aluminum Metal Heatsink Raspberry pi 4 Case Adafruit PID 4341
6. Qty 1 Stacking Header extra long Adafruit PID 1979
7. Qty 1 Stacking Header standard Adafruit PID 4079
8. 12"x24" 1/8" textured plastic sheet Parts-express Part 265-948
9. 16gb MicroSD card, from anywhere

10. Micro HDMI to HDMI cable less than 3 foot long is good enough(I got mine off of Amazon)

I chose to hinge the front cover, and use the textured plastic as a bezel to mount the monitor, Pi and GPS receiver. You can cut that plastic with a jigsaw or band saw, and then a sander to round the corners. The cutout for the monitor I did with a Dremel. Monitor mounted from the front, and yes if you look at that sloppy job its hot glue around the monitor. I couldn't come up with any fancy way to attach it.

Basic High level procedures for setting up the Pi with the GPS receiver

1. Download the latest raspberry pi OS image from raspberrypi.org
2. Follow instructions to image a microSD card and install it in the computer
3. Connect the monitor and Pi and keyboard temporarily on a desk to get working
4. Learn how to run updates on OS from above raspberrypi.org tutorials online
5. Install Zero2Go DC power supply, this converts 12v down to 5 volts, **read notes below on this further down**
6. Install GPS receiver and take a look at some general instructions on setting up the Pi as a NTP time server here below. Just read the instructions after the initial raspberry pi image part <https://github.com/TinajaLabs/ansible-role-ntp-gps/blob/master/README.md> There are other examples out there, and this is where I'll leave it open for others to research as there might be better ways.

Zero2Go board install notes.

This board in theory should be easy to setup, but using a Pi4 creates some headaches due to new OS versions of software. Go to there website for details, but even then you may run into

issues. There are configuration step to install there software so that you can configure the board to boot the pi up when power is applied, or to remain off and requiring you to push a button on the right side of the board. Since I don't have access to the button, I needed to install there software to change the setting.

Unfortunately, after installing the software, and making the change to boot up at power on, caused some issues after the first reboot. The zero2go board would constantly reboot the pi after login if I was connected only by 12v. If I use the pi USB power supply, it wouldn't do that. I tried everything and decided to just remove there software so it wouldn't start up at boot. This stopped the reboot, and the card remembers my changes, so next time it will continue to boot up when power is applied.

So basically, install the software, change the settings to the zero2go card to have it boot when power is applied, and uninstall the software.

Conclusion

Overall, I was impressed at the performance of the Pi 4 in this use case. FT8 is CPU intensive and generally doesn't decode fast enough on a Pi3. On a Pi 4 its usable. I found that it would decode a good 8 to 10 signal quickly and then another 5 to 6 a bit past the starting time for the next transmission. That's not ideal since the timing would be off when you responded to a QSO. But the stronger, easily decoded signals popped up fast and it was able to transmit on time.

Using FLRig control was fairly easy to setup. I was using a usb to serial cable for the FT450D, and had to determine what comm port to use in Linux

Setting up the Signalink was a bit more of headache. Mostly the pain was self induced. The internal jumpers on my signalink are loose from changing it up on many rigs over the years. I fought that for a while until I finally just used a new dip socket to fix the problem. After that, it worked just fine.

Future plans, I'd like to shoehorn a 2m/440 rig in there but that signalink and speaker is in the way. I might relocate the speaker to the right of the monitor, and I may permanently modify

the signal link up near the monitor too. I just have to extend the 3 volume controls to the front with some wire. Sort of a remote head Signalink.

Key ham radio apps installed

- FLrig – Rig control
- FLDigi – PSK31 and related digital/CW modes
- WSJT-x FT8/JT65 and related
- CQRLog Logging program
- PiGate, a Winlink version for Linux for email over HF
- And a variety of other apps to long to mention here.

Below is WSJT-X with FLDigi running on the right. Yes this is a small screen, your gonna need reading glasses, but it works ?

No planned NETS for Christmas Eve or New Year's Eve.

Please note that the [weekly club nets](#) will not be held on the following dates:

Christmas Eve – Thursday December 24th, 2020

New Year's Eve – Thursday December 31st, 2020

Wishing everyone all the best for the holidays, and 2021.

Mike, K9KMV

Results Announced! “Field Day Is Not A Contest”

Back in the summer, the [Schaumburg Amateur Radio Club](#) added a little competitive edge to Field Day 2020, by organizing a competition for it's members and awarding financial prizes in several different categories:

1st Place \$50

2nd Place \$25

3rd Place \$15

Here are the official results, which have now been certified by the Board. Congratulations to the winners!

Well done to all those who took part in Field Day, be it indoors at home, in your back yard, or out in a park.

It was a very different Field Day to those we have been accustomed to, and hopefully Field Day 2021 will see a return to normality.

Happy Holidays,
Mike K9KMV

K9KBM: Automotive Manufacturers Limits of RF

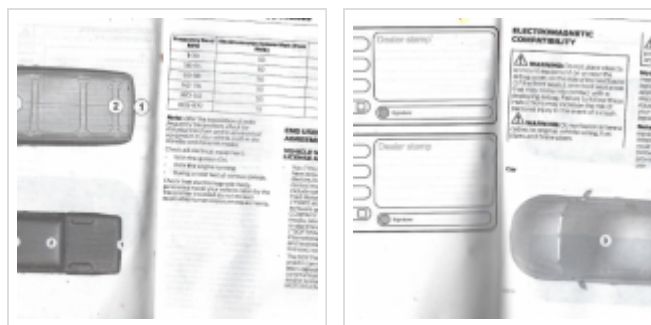

Dave, K9KBM, has provided us with some useful insight regarding guidelines by automotive manufacturers, relating to the use of RF in vehicles. If you have a newer car you might want to check your owner’s manual under the heading of “Electromagnetic Compatibility”.

Not only are there warnings to keep antenna and power cables at least 4” from electronic modules and airbags, it limits power output to 50W on all frequencies except 806MHz-870Mhz which is limited to 10W. There are also images showing the placement of antennas at different frequencies.

This relatively new addition to owner’s manuals is due to the “**World Forum for Harmonization of Vehicle Regulations**” or **UNECE regulation 10**. The limitations and warnings may be new to the public but have been around for years although less formally in the auto industry for commercial and emergency vehicles.

The following examples are taken from Dave’s owner manual.

73, Mike K9KBM

Winter Field Day 2021 is approaching

Winter Field Day takes place each year on the last full weekend of January. For 2021 it will be on January 30th/31st.

Here is the link to the organizer's website: <https://www.winterfieldday.com/>

Due to COVID-19 restrictions, it is unlikely that there will be any club group events taking place, but it will still be possible to operate on an individual basis.

Here are a few pictures from recent years, which will hopefully inspire you to take part in some way.

Happy New Year,
Mike K9KMV

Reminder: No Club Net on New Year's Eve

A friendly reminder to all that **there will not be a weekly club net** on Thursday this week, as it falls on New Years Eve.

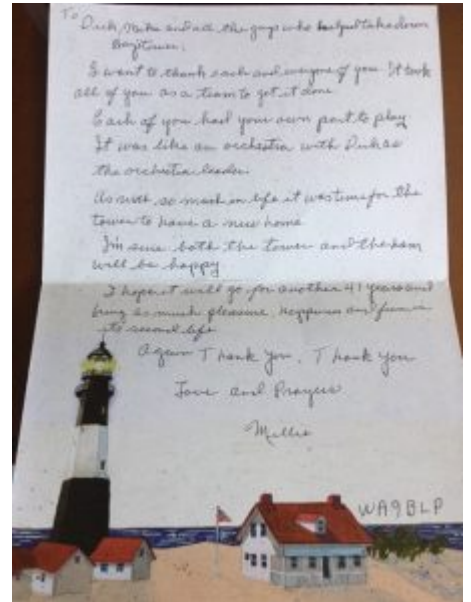

Happy New Year to everyone.

Mike, K9KMV

Tower Removal video – Ray WA9BLP – August 2020

Back in August 2020, a brave group of SARC club members volunteered their time and experience to help take down the radio antenna tower at the home of silent key, Ray WA9BLP.

At the time, Roberto WA9E was able to take some great video footage of the project. The video has now been edited, and is available on the SARC YouTube channel, by using the following link.

SARC - Radio Tower Removal for Ray, WA9BLP

Thanks to all involved. Here is a link to an earlier post that shows [Millie's Thank You note](#).

Cliff Sowka K9QD

Secretary's Report:

Cliff Sowka K9QD informed November's Minutes published in RHG. Approval so moved. SARC Website requires Officer/Committee information updated.

-

Treasurer's Report:

-

Chris Brewer AC9GN. Not present. Need Financial Report for close of 2020. Need Proposed Budget for 2021.

Public Service:

Rob Glowacki N9MVO informed there is nothing to report at the moment.

EMCOMM:

John Zietlow K9WIC. Activity currently on hiatus.

Repeaters:

-

Terry AE9TJ reported our machines are functioning properly. Leo N9NBH described inability to invoke NEWSLINE while AllStar attendees were online. Discussion with Rob N9MVO ensued regarding up/down data speeds and/or Repeater Key/unKey controller process was thwarting ability to bring NEWSLINE up onto the machine. We'll need to review our data service invoice to determine what speeds we're contracted for and if that may be part of the difficulty in handling the audio stream's capacity when three or more AllStar ports are connected. Could also be related to the controller's command sequence; not sure at the moment.

Construction Project:

-

Bill McGovern W9WEM no report.

VE Exams

-

Ed Liska AC9SD reported the single candidate scheduled for early December did not attend the planned exam and the Volunteer Examiners returned home. No plans for January or later in Q1 until such time as the VE Team can find suitable facilities to hold their testing sessions.

Radio Hill Gazette RHG

Mike Griffiths K9KMV reports there was a recent article submitted as a very informative reprint but he was hesitant to publish without the original author's authorization.

Membership:

Bob N9JAX no report.

Social:

No current plans.

Education:

Leo N9NBH reports our training schedule will be on hiatus for the duration. Dennis KD9HIK described DuPage Club's plans for ZOOM license training to be offered starting January.

-

NETS:

-

No planned NETS for Christmas Eve nor New Year's Eve. Mike K9KMV will post this update on the Website to inform those not currently receiving SARC-ALL communications.

Steve Karson AC9EM submitted the following report for December 3rd:

Thanks everyone, for checking into our Club NET tonight. 25 Hams checked in!!! Question of the night: The weather is getting colder, is your car battery ready for the winter? Will your ham radio operate if you have one installed? We had some traffic about Skywarn, Wellness Net, recent silent keys, and other topics. Also, we are sponsoring outdoor VE Testing this Saturday. Check the Club Web Site for details if you are interested in taking a test...

Check-ins included:

K9MKD, Kevin

N9MVO, Rob

W9RKK, Robert

K9KMV, Mike

N9NBH, Leo

KB9RGU, Jim

KD9HIK, Dennis

K9CMZ Charlene

K9WIC, John

WB9UXN, Brent

AC9SD, ED

N9IJS, John

N9LTW, Lou

KD9KSH, John

KD9NJR, Don

K9KQX, Mike

W9YY, Jack

W9YFC, Doug

KB9QVX, Kevin

N9VWC, Mike

KD9JBS, George

KD9QAH, Tim – Welcome new SARC Member!

K9GBN, Garret

WA9E, Roberto

AC9EM Steve Net Controller

Be Safe and Happy!!!

73

Steve Karson, AC9EM

For the December 8th TechNet, KD9HIK was Net Control Operator. The Net started at 7:32 PM, local time. The following operators checked in:

N9MVO Rob

W9RKK Robert

W9WEM Bill

WB9UXN Brent

WB9VWM Hugh

KD9FMN Paul

K9CMZ Charlene

K9KBM Dave

AC9SD Ed

K9QD Cliff

W9YY Jack

K9WIC John

KD9KSH John

WE9PP Jim

KF5IV Owen

W9YFC Doug

KD9NJR Don

KD9AJI Chris

KC9NMW Tim

N9IJS John

VA3DMZ Scott (Checked in from Windsor Ontario via ALLSTAR)

KD9OLJ Sid

KY0Q Rich

Topics included discussion about use of Choke BALUNs and lightning suppressors on exterior di-pole, RF Chokes on long wire antennas, “MAKER’ sites and 3D printing.

KD9FMN asked about documentation of maximum safe RF in mobile applications. Concern was about potential to damage in vehicle computers.

N9IJS reminded DMR users that BRANDMEISTER will be implementing a security protocol and that Hot Spots will have to be updated.

Please let me know if there are any omissions or corrections.

Leo Ribordy N9NBH submitted the December 15th TechNet report:

Thank you to all the hams who checked into the Tuesday evening net. The question for the evening was: During a contest can you check in and make a few contacts and then leave?

Yes you can, though the group running the contest would like you to participate for the full time. Do you have to submit a log? No you do not have to submit a log to the contest nor

You do not have to send your logs to Lotw or QRZ. Sending your logs to Lotw will help keep a record if you are working on any certificates.

Vice President

Danny Kafka KD9HIL

Director Ed Lishka AC9SD

Secretary

Cliff Sowka K9QD

Treasurer

Chris Brewer AC9GN

Treasurer's Report:

Chris Brewer AC9GN. No Report. We're not sure if the annual insurance renewal cycle has been completed. We also need a proposed budget for 2021.

Public Service:

Rob Glowacki N9MVO. No Report.

EMCOMM:

John Zietlow K9WIC informed there will be a SkyWarn Net this coming Saturday on 3905 KHz hosted by ARRL Section Manager Tom W9RY. Also, Illinois EMMCOMM is studying the possibility of a WINLINK simplex exercise utilizing repurposed WiFi equipment for Amateur use.

Repeaters:

Operations normal after a recent reset. Rob N9MVO and Terry AE9TJ will be conferring with Leo N9NBH to determine some options in providing internet access for reactivating the currently dormant Fusion machine. If the Barrington Road installation is used, then antenna/diplexer accommodations are needed. If the Plum Grove installation is used, then WiresX + another Fusion radio for slave link back to Barrington Road's internet connection could be built. There also needs to be information provided to Illinois Repeater Association to

update our equipment location and frequency utilization. The team will work to prepare an update during the December Business Meeting.

Construction Project:

Bill McGovern W9WEM. No report

VE Testing:

Ed Lishka AC9SD. Plan for December currently indicates there will be a testing session held for one candidate this coming Saturday.

Nets:

Leo Ribordy N9NBH provided the following report for the November 24th TechNet:

Thank you to all the hams that checked into the net this evening. Asked all the check ins what they were doing for Thanksgiving and also if they remembered the Polio vaccination we went through as kids.

KD9OLJ Sid

W9YFC Doug

Ed, AC9SD, reported that there will be a Volunteer Examination in December.

Mike, KD9POE, suggested that due to Covid restrictions that make face to face meetings difficult, that we look for topics that might be difficult for new Hams. Several suggestions for simple antennas to deal with ordinance or HOA restrictions, including attic mounted J Pole, attic mounted fan dipole, and portable Wolf River Coil.

No operators reported participating in the ARRL EME Contest.

Additional discussion regarding JS8 Call.

Reminder that the SARC Board Meeting, by Zoom, will be held Wednesday December 2 and regular club net on Thursdays.

As in the past, apologies if I missed someone or got the information recorded incorrectly.

Net Closed ~ 8:06 PM (local time).

Dennis C. Calvey_

Radio Hill Gazette RHG:

No Report. Mike K9KMV requests articles.

Recurring Calendar:

Insurance, Meeting Room Reservations for the Airport, Tennis Plus Basement, and CRC, need to be renewed for 2021. Cliff K9QD resurrected previous traffic to assist in establishing the proper governmental contacts required.

Membership:

Geoff KA9QGH. No report.

Publicity:

Dennis C. Calvey KD9HIK Publicity Chair reported there may not be a published re-opening plan from the Schaumburg Park District for several months.

Social:

John KD9KSH. Present. Nothing to report for obvious reasons. Dirk W0RI had previously has suggested a Road Rally event via SARC-ALL. Interest remains alive but no updates at the moment.

Education:

Leo N9NBH. No Report.

Programs:

John K9WIC indicated Tom ARRL Section Manager W9RY is available to present prepared ARRL materials if we request.

Old Business:

-

An invoice was presented for “Website Listing Service”. Invoice was referred to Matt Walsh for verification. Ed AC9SD will send the invoice notice (due December) to Chris AC9GN so that our Domain N9RJV.ORG is renewed for 3-years at \$180.

It is unknown if our insurance has been renewed; normal renewal cycle is ~April/May and we will need to check with our Treasurer to ascertain current coverage.

New Business:

Fusion Machine implementation will be studied and discussed during our December Business Meeting.

Motion to Adjourn:

Meeting adjourned 7:58PM. Submitted December 3, 2020. Cliff Sowka Secretary
